01 / START HERE

Quick start

Begin with the default settings, attach XENO to XAUUSD M5 and confirm the dashboard reports READY before enabling trading.

INPUT	DEFAULT	WHAT IT DOES	IMPORTANT NOTE
Lot Size	0.01	Sets the starting trading volume for a new cycle.	Higher values increase margin use and risk.
Max Layer	20	Limits the number of XENO positions in one basket.	A maximum limit does not guarantee sufficient margin.
Entry Mode	AUTO	Lets XENO select the supported cycle mode.	The internal selection logic remains protected.
Step Mode	NORMAL	Uses the standard position-management profile.	AGGRESSIVE can increase exposure faster.
Drawdown Guard	0	Optional account-protection threshold.	0 means OFF.
Trading Session	ALL SESSIONS	Controls when a new cycle may begin.	Choose a session that matches your trading plan.
New Cycle Delay	0	Optional waiting time before the next cycle.	0 means no additional delay.
News Filter	ON	Restricts trading around selected economic events.	Review the news status on the dashboard.

Section labels

LabelA, LabelB, LabelC, LabelD and LabelE are visual separators in the Inputs window. Leave them blank; they do not change EA behavior.

02 / LICENSE AND RISK

Core account controls

These inputs identify the licensed account, set the starting volume, limit basket depth and configure optional protection.

INPUT	DEFAULT	WHAT IT DOES	IMPORTANT NOTE
License Key	Blank	Enter the XENO licence assigned to the MT5 account.	Copy it exactly and do not add spaces.
Lot Size	0.01	Sets the initial trading volume for a new cycle.	Increasing it raises margin use and drawdown risk.
Max Layer	20	Sets the maximum number of positions allowed in one basket.	This is a cap, not a target.
Drawdown Guard (%)	0.0	Activates Risk Lock when the configured account drawdown level is reached.	0 means OFF. Review the account before resuming.

Drawdown Guard examples

VALUE	BEHAVIOR
0	Protection is disabled.
5	Risk Lock activates when the configured drawdown reaches 5%.
10	Risk Lock activates when the configured drawdown reaches 10%.

Important

Risk Lock remains active until the user reviews the account and resumes trading from the dashboard.

03 / ENTRY AND BASKET

Cycle configuration

These settings control the public operating mode. Proprietary signal and position-management logic remains protected.

INPUT	DEFAULT	WHAT IT DOES	IMPORTANT NOTE
Entry Mode	AUTO	Selects Auto, Follow Direction or Straddle.	Changing the mode does not alter an open basket.
Entry Method	STOP ORDER	Selects Stop Order or Instant behavior where applicable.	Availability depends on the selected Entry Mode.
Step Mode	NORMAL	Selects NORMAL or AGGRESSIVE position management.	Test AGGRESSIVE on demo before using it.
Basket TP Distance	0.40	Sets the target distance used for the combined basket.	It is a price distance, not a guaranteed USD profit.
New Cycle Delay (Seconds)	0	Adds a waiting period after a basket closes before another cycle may begin.	0 disables the delay; 10 adds ten seconds.

Entry Mode options

OPTION	BEHAVIOR
AUTO	XENO selects the appropriate supported operating mode.
FOLLOW DIRECTION	Allows a new cycle only in the direction accepted by XENO.
STRADDLE	Prepares both sides and begins the side confirmed by market movement.

Open baskets

Controls that pause new entries do not abandon an existing basket. XENO continues managing it until completion or a protection control intervenes.

04 / TRADING SESSIONS

Choose when a new cycle may begin

Select the trading sessions in which XENO is allowed to start a new cycle.

OPTION	BEHAVIOR
ALL SESSIONS	Allows new cycles during any supported trading session.
ASIAN ONLY	Allows new cycles during the Asian session only.
LONDON ONLY	Allows new cycles during the London session only.
US ONLY	Allows new cycles during the US session only.
ASIAN + LONDON	Allows new cycles during either the Asian or London session.
LONDON + US	Allows new cycles during either the London or US session.
ASIAN + US	Allows new cycles during either the Asian or US session.

Existing basket

When the selected session is not available, new-cycle entry is paused. An existing basket continues to be managed.

05 / DISPLAY AND TARGET

Dashboard and daily controls

Use these settings to control chart presentation and the optional daily target.

INPUT	DEFAULT	WHAT IT DOES	IMPORTANT NOTE
Dashboard	TRUE	Shows the XENO dashboard on the chart.	Trading can continue when the panel is hidden.
Dashboard Size	0.0	0 enables automatic sizing. A manual value adjusts the panel size.	Use a size that fits the chart clearly.
Use Daily Profit Target	FALSE	Enables or disables the optional daily target.	When reached, no new cycle starts for the rest of the trading day.
Daily Profit Target (USD)	0.0	Sets the target amount for the day.	This is not a guaranteed profit.

Dashboard states

STATE	MEANING
READY	The EA is running and no higher-priority entry restriction is active.
SESSION HOLD	The selected trading session is not available for new cycles.
COOLDOWN	New Cycle Delay is counting down.
TARGET HIT	The configured daily target has been reached.
NEWS BLOCKED	News protection is currently restricting trading activity.
RISK LOCK	Account protection is active and manual review is required.
PAUSED / STOPPED	Dashboard control has paused new trading.

Connection warning

The Experts journal shows a warning when terminal-to-broker latency rises above 30 ms and a recovery message when it returns to a normal level.

06 / NEWS PROTECTION

Economic-event controls

News protection can restrict new entries and additional exposure around selected economic events.

INPUT	DEFAULT	WHAT IT DOES	IMPORTANT NOTE
News Filter	TRUE	Turns economic-news protection ON or OFF.	Turning it OFF removes this protection.
News Mode	NORMAL	Selects the standard or broader event-monitoring profile.	STRICT can create more blocked periods.
News Impact	MEDIUM + HIGH	Selects Medium + High events or High Only events.	Low-impact events are not included.
News Pause	30	Number of minutes before a selected event when protection begins.	The value is in minutes.
News Resume	30	Number of minutes after a selected event before trading may resume.	Other active controls may still block a new entry.

During protection

The dashboard shows when news protection is active. Existing positions continue to be managed by the EA.

07 / OPERATION REFERENCE

Safe setup checklist

Complete these checks before allowing XENO to begin a new cycle.

STEP	CHECK
1	Confirm the chart is XAUUSD M5 and the correct XENO EA is attached.
2	Enter the licence key assigned to the current MT5 account.
3	Start with the default 0.01 lot on demo and verify broker behavior.
4	Choose Entry Mode, Step Mode and Trading Session deliberately.
5	Confirm Algo Trading is enabled and the dashboard reports READY.
6	Review margin, drawdown and news status before leaving the terminal unattended.
7	If using a VPS, confirm migration completed and monitor latency warnings.
